An Abstract of the Tide Table with the age of the Moone shewing the howers and minutes of full Sea at London Bridge, as also at *Tinmouth*, *Hartlepoole*, *Whitebay*, *Amsterdam*, *Gascoigne*, *Brittaine*, *Galizia*, and the places adjoyning every day this year. 1643.

The age of the ☽	Inc.	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
	dec.	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
Ful Sea at Lond.	ho.	3	4	5	6	7	7	8	9	10	11	11	12	1	2	3
	mi	48	36	24	12	0	48	36	24	12	0	48	36	24	12	0

The use of these tables is very easie: Example on the other side against the first day of January I find the Age of the Moone to be 21. which I look in this Table and find under the age of the Moon decreasing these figures, 7 houres and 48 minutes which sheweth that it is Full Sea at London Bridge, &c. at 7 a clocke, and 48 minutes past in the morning. You must note that every Tide altereth 24. minutes of time, and the full Sea in the said places will be 24. minutes later in the afternoon, viz. at 8 of the clock, and 12. minutes past: Doe thus with any other place, as the Tables direct you, and you shall finde it so easie, that unlesse you have manus sub pallio, or pleade ignorance, you will neede no further directions.

Yet you must observe that it floweth one point of the Compasse more in the Spring tides, that is, at the New and Full Moones, than it doth at the Neap tides, that is, at the quarters of the Moone, especially if it bee a River where there is any indraught, and that is of good distance from the Sea; yea when there is neither rage of windes, land-floods, nor other cause to produce or hinder the said effect; As for example, It floweth at London-bridge at the New or Full Moone, when her is South-west or North-east: but in the quarters of the Moone it scarcely floweth there when the Moone is South-west and by South, or North-east and by North. And at London-bridge it commonly floweth 5 howers and ebbeth 7 howers, though at other places it is 6 howers flood and 6 howers ebbe. Land floods and great winds much alter the Tides and so doe the Aspects of the Planets to the Moon and her latitude: For if she have North latitude she swelleth the Seas the sooner, but South she raiseth the Sea later.

The Sea hath fits; alternate course she keeps:
From deep to shore, and from the shores to deeps,
What ere the cause be it ne're resteth stound,
But's ebbing, flowing, alwaies going round.
Sure the Moon (nights Lamp) with her chang-full Lawes
Commands the Ocean, and it's motion cause.

January hath xxxi. Dayes.

Could man but read in Gods great book of Heaven,
Where Starres (like golden letters) infinite
Are plac'd; or throughly know the Planets seven,
Then he the course of Tyme might truely write,
And speak of change of Aire, and turnes of States,
For ſtars ſhew men, Kingdomes, and Countreys fates.

Great Starres conjoyn'd, do shew great alterations
In many Kingdomes, Countries, nay all Nations
Shall suffer change, so saith th' Astrologer,
For in this Moneth Saturne with Jupiter
And all the Planets one another viewing
By severall raves, great Wonders are foreshewing.

The Suone approching to his Exaltation,
Having left Saturne, falls in consultation
With Iupiter, just entring both together,
The heavenly Ram, causing great change of weather,
With store of rain or snow and sturdy stormes,
So Hermes threatens, if not worser harmes.

A Square of ſullen Saturne; angry Mars
And Iove aſſiſting, bodes ſome ſuddain jarres.
And wily Hermes playes his wonted pranks
In ſtorms, for which wee'l con him little thanks.
Saturn and Venus have no good portent,
Hee's in his fall, She's in her detriment.

Venus and Jove together knit their powers,
Bring pleasant weather with some fertile showres,
Which Mars maligning strives to put asunder,
And threatens us with lightnings, stormes & thunder,
Heavens constant motion, and stars great Aspects
Do variously produce most rare effects.

The influence of pleasant Pleiades,
Is much augmented by sweet Venus rayes,
Both rise, and culminate, and set together,
Distill mild dewes, 'Tis not unwelcome weather:
But see how suddenly our joyes are quasht,
The Winds do roare the earth with showr's is dasht.

Mars joyn'd with Cor Leonis and in Trine,
To Jupiter who doth with Phœbus ſquare,
Do duplicate Sol's fires, whoſe rayes ſo ſhine,
They will raiſe thunder, or much heat the Aire,
'Twill not be always Summer. Loſe no day
To carry in, when you have made your hay.

A square of Venus, and a friendly Trine
Of Sol to Jove, makes Sol most clearly shine,
As women maske their faces that are faire,
So Saturn's aspect coolcs and darks the Aire,
Some comfort yet, Hermes is not behind,
He joyne with Iove, both bringing wholsome wind.

English Account.

The two Inferiours very nigh the Sun,
Co-rising with Antares, and the Moone,
Just at her full opposing doth declare
A manifest and suddaine change of aire,
And angry Mars with Hermes mingles rayes
Which many men will very much displease.

A Prognostication

Booker 1643.

A Description of the severall parts of the Almanack for this present Yeare. 1643.

In the first Columne is placed the golden number so called for the excellent use it hath in finding the day of the change of the ☽: This yeare it is 10. And in this my Kalender is noted in a red Character or figure over against such a day of the Moneth as the Moone changeth in: The next yeare it will be 11. when I shall have occasion to speake more thereof; And every yeare it increaseth one till it have made the number of 19. And then it begins againe. The second Columne is the dayes of the Moneth. The third Columne is the dayes of the Weeke. A being the Sunday letter in our accompt. The fourth Columne hath Feasts and holy dayes, the beginning and end of Tearme, the places of the Planets, Orientall when they are to bee seene before Sun rising, Occidentall when they are to be seene after Sun set, &c. The fifth is the signe and degree the Moone is in every day at Noone. The sixth Columne is the houre and minute of Sun rise at London, by helpe whereof may be known his setting the length of the day and night every day throughout the yeare.

Double the houres and minutes of Sunne rise (60. minutes make an houre) and they make the length of the night. Substract the houres and minutes of ☉ rise from 24. houres and the remainder is Sun set.

Double the houres and minutes of Sun set, and you have the length of the day, it is so easie, Example is needlesse.

The seaventh Columne is a probable conjecture of the weather from the Motions of the Starres and Planets with the ☌ ☍ ☐ ✶ ☌ some new aspects most in force this yeare, with the houre when such conjunction or aspect happens.

A Obser-

Obſerve that in this Almanacke of mine for this Yeare (a) ſtands for afternoone, (b) for beforenoone (m) for morning, (n) for night: Examples in all theſe in October this yeare, on the ſecond day I finde theſe Characters, ☽ ☌ ♃ 3. M. which ſheweth that at that time, viz. at three of the Clocke in the morning is an oppoſition of Iupiter & Mars: The third day I find, ☌ ☉ ☿ 3. a which is an oppoſition of the Sun and Iupiter at three of the clock afternoone. The ſeaventh day I finde ☌ ☉ ☌ 10. b. which is a Coniunction of Mars and the Sunne at ten of the clocke before noone, And the 26. day I find ☌ ☌ ♄ 7. N. which is a coniunction of Mars and Venus at 7. of the clock in the night: In this Columne is a probable coniecture of the Weather in every moneth with other Aſtrologicall obſervations, &c.

On the other page on the right ſide thereof is the Forraigne accompt D. being Sunday Letter, it being ten dayes before the Indian or Engliſh accompt: And to that I joyned the true accompt to the yeare, 1734. (if the World laſt ſo long) F. being Sunday letter being two dayes before and truer then the Forraigne computation, and two dayes before and truer then our Engliſh accompt. But of this more (God willing) hereafter.

A briefe deſcription of the foure quarters of this yeare.

THe Spring begins on Friday the tenth of March, 34. minutes paſt 3 of the Clock in the afternoone: The 4. degree ♏ in the Horoſcope: wherein is Pars Fortunæ: Mars is culminating in an exact □ to the Aſcendent and that partile. And the Pleiades or ſeven Starres at that inſtant are in the mid-heaven: Mars paſſing by the Bulls eye, and other great and powerfull Starres in the ſigne Gemini, Mercurie is in the Cuſpis Domus Religionis, but retrograde, and in ✶ to ♄ at this inſtant, the Sun being newly ſeparated from the coniunction of Malignant Saturne, applies to the body of the benevolent Iupiter. And the Moone about 12. houres before having beene in conſultation with them all by the 8. houſe at the ☉ in greſſe, it betokens ſome notable occurrences to happen this Revolution: The Moone is Delatrix omnium impreſſionum & influentiarum aliorum Planetarum, per Globum ipſius ad nos ultimo deſcendunt: Let us all pray to God that he would divert thoſe heavie iudgments impending over our heads, and grant peace in Church and Common-Wealth, Mars hath great dominion this yeare being direct in motion from the 24. of November 1642.

the end of October 1644. running the Zodiaque round, Vnde colligi possit bella fore continua, &c. Read Haly Libro 8. Capit. 7. of Mars, his being in the tenth house. But the ☽ desluxion from ☿ body to a ✶ of ♂ and a corporall iunction to ♀ at the happy ☌ of Iupiter and the Sunne which is on the 11. of March iust at his setting in the Cuspis of the seventh house, in my apprehension is an argument of peace and much good to follow this great revolution. And it may be called a great Revolution indeed, for it immediately succeeds the most wonderful conjunction of Saturne and Iupiter that hapned these many centuries of yeares by past, or shall be to the end of the World if wee may give credit to divine and humane computations.

Pe lege, scrutatus veterum monumenta Sophorum,
Quicquid habet Latium, quicquid & Hellas habet.
Quicquid habet veterum num ficta pagina famæ,
Hos cæli monitus quo tuearis, habes.
Non fuit vllius Regni mutatio, quæ non,
Significata prius certa per astra foret.
In promptu est, miseri quæ sit turbatio mundi,
Illius at nemo dicere fata potest.
Orandum est, vitæq; modus melioris agendus,
Placari haud alia vult ratione Deus.

Of the Summer.

SAmmer beginneth (or rather it is Midsummer) this Yeare when the Glorious Sun entreth the first minute of Cancer which is on Sunday the 11. day of Iune at 55. minut. past 6. of the Clock in the afternoone, The benevolent planet Iupiter, is angular in the North in the exaltation of the Sun in 20. degrees of ♈ in a perfect △ to the Assendent being ♃ his house and ioy, which promiseth much good to happen this Summer: For thus say the Astronomers. Aerem temperatum & Ventos septentrionales efficit mediocres tamen ex quibus animalia & semina confortantur. And for that hee is in the fourth house, and very strong, Culturam agrorum fortunatam, Ex quibus magnum proventum spondet, And yet ☽ believe his □ to Mercury will produce a great store of alteration of ayre, (Apertio portarum) tending to great windes, &c.

Of Harveſt.

HArveſt or Autumne beginneth on Wedneſday the 13. day of September at halfe an houre paſt 9. of the clock in the forenoone at which time the Sun entring the firſt ſcruple of Libra, his fall being very neere to Mercury and Mars who is in his detriment and all of them in oppoſition to Saturne who in his fall likewiſe ioyned with Pars fortunæ, not only cauſe Apertio portarum, to great winds, much raine mixt with haile and ſnow many times in this quarter eſpecially about the 9. 14. 17. 24. and 30. dayes of this moneth of Sept. but alſo ſtrange weather the 2. 3. 7. and 26. dayes of October, in which times there is great meetings and Aſpects of the Superior bodyes and ſome other mixt dayes the Moone (the Earths Planet) receiving their influences conveighs it to us: Some of which I have toucht in my Almanacke: Die 9. Septembris ☌ ♄ ☍ 14. die ☌ ♄ ☿ 17. die ☌ ☌ ☿ ☍ ☉ ♄. In ipſo Plenilunio Ecliptico in duodecima domo ubi ☽ domina aſcendentis Eclipſis imediate a Corpore Saturni defluxit ad ☍ martis & Mercurij, ſine dubio multa bona conſilia turbabunt atq; evertent variaſq; ſimultates & diſſentiones, tam in ter Proceres, quam inter plebem excitabunt, &c. Et principium Octobris mihi ſuſpectus eſt Ob. ☍ ☿ ☌. ☍ ☉ ☿. ☌ ☉ ☌. Oramus patrem & principem pacis per Ieſum Chriſtum Dominum & fratrem noſtrum toto pectore, humiliter, ut in his turbulentiſſimis temporibus quibus ſtygius Sathan e lacu infernali plane in terras emiſſus eſt, omni magiſtra tui qui Chriſtum confitetur, ac recte colit, pacem atq; quietem benigne largiatur, & omnia fraudulenta atq; cruenta conſilia fortiter reprimat. Ita enim quietiorem & tranquillio rem vitam in omni pietate & honeſtate Agemus. Amen, Amen, Sancta & gloriosa Trinitas, & adoranda Vnitas. Amen.

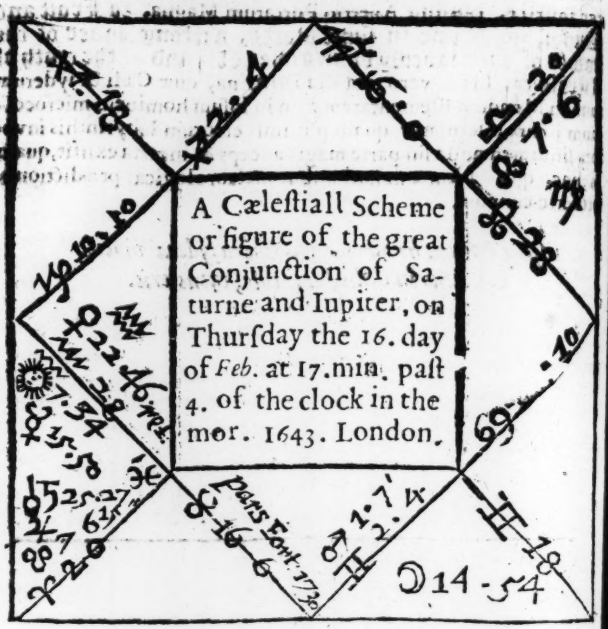
Of Winter.

VVInter beginneth this yeare on Monday the eleventh day of December 5. minutes paſt 9. of the clock in the night, At which inſtant of time, The beginning of the cold and dry ſigne of ♑ is in the aſcendent: And in the mid-heaven the ☽ is applying to the ſeaven Starrs: Likewiſe Mercury who is Lord of the Horoſcope being in corporall conjunction with fiery Mars in the North Angle, and both of them Coaſting with the great Starr, Cor Scorpionis: all riſing about halfe an houre paſt 6. in the next mid-

morning, are arguments of great windes and tempests, which is much augmented by the then present Quartile of Saturne and the Sun at the Suns entrance into this Winter solstice, causing Apertio Portarum Magna, to Frost and Snow, or Raine in some places, a strong Index of the power of the heavenly bodies over Us, and of the truth of Astrology, Licet vero tota illa Doctrina, quæ Cæli & syderum tum in Mundum Elementarem, tum in ipsum hominem microcosmum influxus scrutatur quam plurimis errorum labyrinthis involuta sit, tamen nulla sui parte magis anceps & incerta existit, quam in hac, quæ de Auræ mutationibus meteorologicas prædictiones proferre conatur.

Astra Regunt homines, mens libera fydera vincit.
Est Deus in Cælis, hunc cole, tutus eris.

ConVentVs graVIs & granDIs satVrnI &, IoVIs, rara profert orbe XpIanIssIMo.



In this Celeſtiall great meeting Saturne hath 2. grades 6. min. of South Lattitude deſcending and Iupiter 1. grade 6. minutes of the ſame latitude. Therefore Iupiter is elevated above Saturne, Conjunctio magna dicitur quando Saturnus & Iupiter ſpatio Annorum 794. dierum 214 (ſeu numero rotundo, ſpatio Annorum 800) ita percurrunt duodecim Zodiaci ſigna ut Denuo conjungantur ſub initium primi conventus ſui in trigono Igneo: This great coniunction haunteth, in 25. degrees, 27. minutes and 15. ſeconds of Piſces in the ſecond houſe of the heavens where the Sun Mercury, Saturne, and Iupiter conVene alto gether. The Moone having beene lately with Mars and the Bulls eye, and newly left the Quadrate of the Sunne in a preſent quartile of Mercury conveighs the rayes & influence of them all to the Quar-

tiles

tiles of the two Grand superiors meeting in the interim with a Trine of Venus, And as the Author of the Masquarade du Ciel in his Marginal notes saith, if this most great conjunction bee not attended with most notable events (most probably for much good) through greatest part of Europe, All Mathematicians must confesse they yet understand not the dialect of Heaven: And in another marginall note there where hee saith, it is the most notable conjunction, yet ever was, so I agree with him, and adde, or ever shall be. For if we adde 800. yeares to this yeare, it will be a number much exceeding the continuance of the World in any computation I ever yet met with all. But of this no man knoweth, I shall adde, Sub octavo trigono igneo hoc quoque tempore, Imperium Romanum magnas mutationes passurum est, quas experientiæ potius committemus, quam nostrum de illis judicium feramus: I reade in Speculo mundi Iohannis Henrici Alstedij, That Ab Anno 1603. ad Annum 1642. (It should bee 1643.) Maximam universus orbis experietur mutationem, nam Istorum Annorum 40. spatio ad finem decurrit septima revolutio Planetarum: And in the same page, Viz. pag. 482. Anno Christi 1642. (it should be 1643.) accidet conjunctio Saturni & Iovis in Ariete, quæ portendit novi alicujus imperii revolutionem.

The nert great coniunction that will happen will be in ♑ 1663: And the next after that in ♌ neere Cor leonis in 1683. To goe further I shall not need to calculate, for I am of the same opinion with the Noble Napier Lord of Marchistoun in Scotland in his 14. Propositon in his plaine discovery of the whole Revelation of Saint Iohn, Read it at leisure.

Stella Jovis Fælix cælo compl'ectitur alto,
Sæcula nunc veterum mutantur, mox nova surgunt,
Atque alias Mundo leges, rituſque reportant,
Et regumque vices mutantur, Regnaque reges
Accipiunt alios, & ſumma ſede reponunt.
Aſt quoque quæ noſtris Jamjam ventura ſub Annis,
Et melior, noſtræ logis, vix pauca refringet,
Aſpera quæ nimium, ſæris & dura ferendis,
Et Genus Omne mali tollet, pompaſque ſacrorum.
At Regem dabit Innocuum, qui temnit orbem,

Et Reget Imperio populos, gentemq́, rebellem;
Imperio subdet, Toti & dominabitur Orbi.

Hactenus Laurentius Bonincontrus in libro tertio Rerum Cœlestium in Vaticinio futuræ conjunctionis Saturni & Jovis Foll. 79.

Quicquid erit, Dominum Cæli terræque precemur,
Ipse sui Curam, Pastor Ovilis agat:
Aduersusque lupos, immanesque satosque Leones,
Defendat, rapidas & fugatur Oves.
Hoc ego supplicibus precor optima numina Votis,
Qui pius est Cupida mente precetur idem.

Some Astrologicall Remembrances.

In my Observations of the Revolution of the yeare 1640. amongst others I observed that Belliger & Iracundus Mars Anni hujus Dominus, vim Iræ & Rabiei passim Capricornistis & toti ejus Quadrangulo tam dirum in medium immittit ut parum tranquillitatis illis remansurum sit, & quod malum maxime ♂ ☌ ♄ tribus vicibus hoc Anno in ♑ Humano generi His palamis authoritate, igne & gladio exalperabit, Rosea Iovis prosapia Contentiones & multa nova percipet & collabentur desyderabila ipsorum; & claudicabit sanitas eorum. And in the same Revolution of that yeare, having found Iupiter and Mars to have beene in conjunction the fifth of march in fine degrees 34. of Capricorne where Iupiter is Cadent and at the Sunn's entrance into ♈ that yeare Mars newly seperated from Iupiter, I thought it a strange conjunction, and that no doubt it would produce as strange matters concerning the persons signified by Iupiter or the Iovialists & Martialists. Whereupon searching some of the Masters of Astronomy, I found in *Guido Bonatus* his Astronomie, 4. part. cap. 34. Tycle very

very words, Si fueris suspicatus utrum in Anno quem revolvis sint futura prælia, seu dissensiones, & unde exciten tur, eta quibus, aspice illi rei secundum modum quem tradiderunt nobis Antiqui, & specialiter ille reverendissimus pre decessor noster Albumazar, qui fuit in revolutionum Annorum scientia, etiam inomnibus aliis artibus Astronomiæ proficuus et valde astutus et audax, erigas enim tunc figuram, ad Revolutionem Anni, et Constitue ascendens, et cæteras domos et planetas Omnes in domibus in quibus inerint, et Aspice Martem et vide a quo ipse separetur, vel a quo sit tunc seperatus, Dixit enim Albumazar quoniam ille est qui mittit eum, et qui excitavit Bellum, quamvis fuerit fortuna ille a quo seperatus fuerit Mars, etiam si fuerit Iupiter, tamen erit excitator Belli de personis, quæ significantur per Iovem, et de potentioribus, et possibile erit quod sit de genere Episcoporum et similium Hactenus Guido Bonatus, I am sure there was then such a coniunction, and that then Mars was newly seperated from Iupiter. How at that time and since to this day the effects have answered, let the World iudge, so fearing what since hath come to passe, in another place of that Yeares observations, I made use of these words, Da Pacem Domine in Diebus nostris S. B. The Licenser expunged all this, and defaced it with a Deleatur, I wonder how they love truth or peace, that will not suffer us to speak of it or pray against War: I have that yeares Prognostication and S. B. his obliterations under his owne hand in my Custody to witnesse the truth. Was there not good ground of Feares and Iealousies? If we should remember the Eclipses of the Sunne and Moone, in 1639. and since that time, and the great configurations of the Planets such as the Coniunction of the two malignants, ♄ and ♂ three times in 1640. Viz. in Iune, August, and September, and the □ of them in the end of December 1641 and beginning of Ianuary, 1642. And thereto adde the ☌ of ☿ and ♂ the middle of May, as likewise the ☌ of Saturne and Mars against in the same, May the 27. day, with other great ☌ and aspects of the superious bodies, and compare the times occurrences we may easily see God forewarnes us of his iudgments by his heavenly Militia, what bloody Murthers, Treasons and Treacheries, what unheard of cruelties, have beene acted in Ireland, by the Rebels there, the powder-plotting blend thirsty Papists, and their adherents possibly affected heerein? Was there not great cause of feares and Iealousies, such a fire is kindled that it is even come to our owne doores, threatning us with unnaturall intestine Wars.

Things

Things were growne to high they could not be worſe, Ec

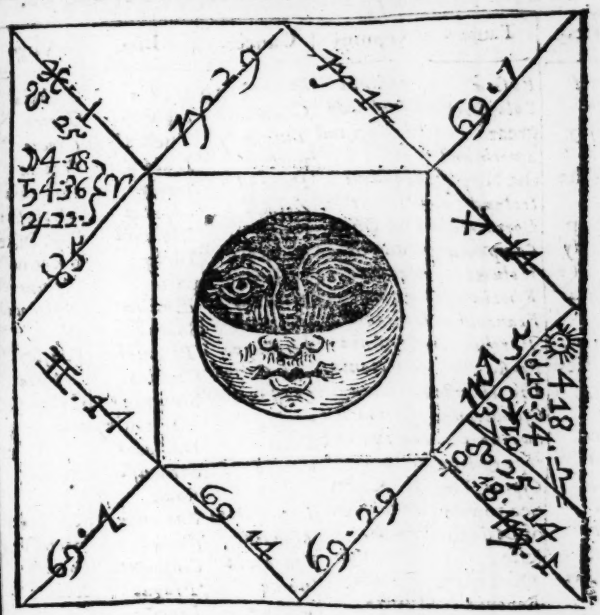
Leniat, ut pœnaſq; graves, clademq; malorum,
Noſq; velit tantis eripuiſſe malis.

*Non Cæli ſydera & Aſtra, (quæ ſunt quaſi Dei Caſtra) ſed pe
cata noſtra atq; ſcelera monſtroſa, portentoſa, ac prodigioſa ma
nam Vim malorum & calamitatum nobis oſtendant, portendu
præmonſtrant atq; præmuniant.*



Upon Sunday the 17. day of Septem. the Moon beginneth to be eclipsed at 23. min. past 5. a clock in the evening and ariseth with Saturne almost halfe dark. And at 47. min. past 6. of the clock upper halfe of her body will be darkened appearing of a black grasish or ashy colour, and at 12. min. past 8. of the clock she will be free again. The continuance of this eclipse will be two houres 49. min. I doubt we shall scarcely observe this eclipse by reason of a great Apertio portarum that attends it causing dark, foul weather, stormy winds & rayne &c. The effects of this eclipse is in force 12. weeks 2. dayes be tuning the 19 of Novem next & ending the 13. of Feb. then next following: I will adde to what hath bin said in the judgments of the harvest: Cum ☽ fuerit eclipsata in ♈ & in 12. domo in ♂ het ☽ et ♂, significat mortem bestiarum quibus homines utuntur, injurias, proditiones, timores, angustias multa latrocinia & servos rebelles, &c. The places subject to these effects are ♈ ♎ ♑ ♉ & ♏, & whosoever hath any principall significators in the first 10. degrees of these signes must have a care, Præmonitus præmunitus.
